

# Take control of your day-to-day with Hop.

## Manage all your operations in one place.

Hop is an all-in-one, cloud-based Property Management System used within the hotel industry to manage bookings, reservations and communications to customers during and after their stay at the hotel. It efficiently integrates with online booking platforms as well as provides customers with offers and promotions.

The Tevalis integration with Hop enables client actions such as posting a transaction to a room so a customer can settle their bill at the end of their stay, and sending the day's revenue back to the PMS system for reporting and analytics.

Manage any and all events from initial enquiry to post-event feedback.

Access real-time reporting anytime from anywhere with our simple cloud-based technology.

## Mobile Optimised

Mobile optimised, commission-free, customisable booking engine with the flexibility to upsell and promote offers.

## Channel Manager

Distribute listing through all major OTA's such as Booking.com, Expedia, Tripadvisor and more.

## Event Management

Hop Event Manager has all the tools for your team to manage events from initial enquiry to post-event feedback.

## Revenue & Reporting

Real-time reporting anytime, anywhere. Rooms sold to the right guest, at the right time, for the right price!

## Multi-Property

Enables hotel groups to centrally manage reservations, inventory distribution, and rates from one platform.
